

MPCH **DryRun** : Dry Running Mag Drive

The new MPCH DryRun horizontal pump integrates Bungartz genuine technology using inert gas to keep magnetic couplings dry. This technique, successfully applied on vertical pumps, offers outstanding benefits for the end-user, including the use of magnetic couplings on hazardous slurries at high temperatures. (Heavy Duty Design)

No ingress of the pumped fluid in the bearing & coupling area, even at stand-by condition.
No usual sliding bearings in sintered material within the rotor of the magnetic drive.

Your MPCH DryRun will simply operate, regardless the nature of the duty.

Your Bungartz partner for Belgium & GDLux.
